MAUI SANDS RESORT TO USE "SMART BAND®" INSTANT ID WRISTBAND SYSTEM FOR PAYMENT AND ACCESS THROUGHOUT WATERPARK

SANDUSKY, Ohio (May 2008) – Sandusky's second largest indoor waterpark resort may turn out to be the area's most secure family destination. Maui Sands Resort, the newest year-round waterpark resort, has announced a partnership with Precision Dynamics Corporation (PDC) to utilize that company's Smart Band® guest wristband identification system for monetary transactions and secure access throughout the resort.

The Smart Band system uses Radio Frequency Identification (RFID) technology, which allows wireless, contact-less secure data transfer to multiple applications. The non-transferable bands work by using radio waves to transmit a unique ID number that can be picked up on designated receivers positioned throughout the facility. A securely sealed RFID tag inside the band stores and transfers encrypted data as guests move about the many activity areas inside resort.

The technology eliminates the need for carrying cash, as purchases and transactions throughout the resort's waterpark, restaurants, spa and arcade can be completed at the touch of one's wrist to the RFID smart readers and kiosks. The system enables parents to set spending limits for their children, which give the kids a sense of independence while at the resort and parents peace-of-mind knowing they have spending control.

Aside from the advantages of cashless points of sale, the wristband system provides unmatched safety, security and convenience to Maui Sands guests, allowing access to rooms and suites via keyless entry, entrance to the waterpark, and maintaining individual purchase information to support the resort's guest loyalty and VIP program.

The PDC Smart Band is constructed of waterproof, non-stretch plastic, which is comfortable to wear. Every guest is issued his or her own unique wristband, and all information stored on the device is encrypted to provide the utmost privacy and security.

The Smart Band technology was developed by Precision Dynamics Corporation, the global leader and pacesetter in the development of Auto ID wristband systems for the leisure and entertainment, healthcare and law enforcement industries.
